

Errata (COVID-19's U.S. Temperature Response Profile, Environmental and Resource Economics, 2021)

1. In the second complete paragraph after Figure 8, the estimate of the constant term in the regression underlying that figure should be 0.9012 rather than the "0.09012" contained in the published version of the paper. A "0" was inadvertently inserted on the right (rather than left) side of the decimal point during copy editing and then another "0" on the left side of the decimal added in a later editing round. This did not influence any of the analysis reported, which was based on the correct 0.9012 value.
